# PIX-HARVESTER® BELTS

## Introduction:

Harvester combines drives are subjected to the most strenuous operations, the dust, the soil, stone granules, stray remains of the harvested crops are likely to create interference during the operation. The drive is often subjected to extreme weather conditions such as hot sunny days, extreme winters and rainy season.

Nevertheless the drive also uses a small size idler which in turn puts a lot of pressure on the Belt resulting into unavoidable increase in temperature and may cause the Belt to deform & reduction in its life. All these factors calls for a very special construction for the Belts which are used in the harvester combines.

PIX which is already an established name in manufacturing of application specific Belts has developed Belts meant specially for the agricultural industry. PIX Harvester Belts are the result of its over three decades of research and experience in the field of mechanical power transmission where the Belts are subjected to stringent conditions. The Belts are made resistant to all the extremities encountered in the Harvester Combines.

Considering the huge and varied demand from equipment used in agriculture. PIX has developed a huge range of Belts covering the entire spectrum of Agricultural application from Harvester Combines to the tractors and the equipment used as an attachment to the combines or tractors.

PIX Harvester Combine Belts are designed to follow the international standard norms used by the original equipment manufacturers and are widely used in the replacement market and offers a trouble-free and zero-maintenance life.

PIX Harvester Belts are available in - Wrapped Construction, Moulded Raw Edge Cogged Construction, Ribbed / Poly V-Belts and Flat Belts.

PIX Harvester Belts are made up of -

- Superior tensile members with specially formulated rubber compound to withstand the rough and tough conditions encountered in Harvester Combines.
- They are resistant to shock loads, vibrations and high abrasion with very low elongation.
- They are antistatic and oil resistant.

The features list is exhaustive, the detailed features are listed ahead.

# PIX-HARVESTER<sup>®</sup>-XS

## Wrapped Harvester Belts

### Construction:

- 1 Polychloroprene impregnated poly-cotton fabric
- 2 Specially designed high modulus cushion compound
- 3 Extra high tensile polyester cord (available in aramid cord also)
- 4 Specially designed high modulus compression rubber

### Temperature range:

- 18°C to 80°C for standard belts
- 25°C to 100°C for special requirement belts

**Reference Standards:** BS 3790, DIN 2215, RMA IP 22, ISO 4184, IS 2494  
ISO 5289, IS 11038, ISO 3410, ASAE 211.4

### Features:

- High power transmission capacity than standard Belts
- Specially designed for reverse idler application
- High longitudinal flexibility suitable for small pulley / reverse idler drives
- High strength tensile member with minimum elongation prevent the Belt against shock-loads
- No bottom cracking / chipping, as Belt design is application-specific
- Suitable for reverse bend drive
- Anti-static, oil & heat resistant.
- Lateral rigidity along the sides of the Belt prevents belt deformation
- Significant performance under variable speed conditions
- Low stretch due to high tensile strength cord

### Belt Label:

**PIX-HARVESTER<sup>®</sup>-XS B 80**

# PIX-HARVESTER®-XS

## Wrapped Harvester Belts

### Classical Section

Product range:

Section	Dimensions			Recommended Minimum Pulley Diameter (mm)	Manufacturing Range	
	Tw (mm)	Th (mm)	Angle (Degrees)		Min (inch / mm)	Max (inch / mm)
AG-A	13.0	8.0	40	71.0	13 / 330	357 / 9070
AG-B	17.0	11.0	40	112.0	16 / 405	900 / 22860
AG-C	22.0	14.0	40	180.0	31 / 785	900 / 22860
AG-25	25.0	16.0	40	250.0	57 / 1445	900 / 22860
AG-D	32.0	19.0	40	355.0	44.5 / 1130	920 / 23370

### Wedge Section

Product range:

Section	Dimensions			Recommended Minimum Pulley Diameter (mm)	Manufacturing Range	
	Tw (mm)	Th (mm)	Angle (Degrees)		Min (mm)	Max (mm)
AG-SPZ	10.0	8.0	40	63.0	365.0	4000.0

## Moulded Raw Edge Cogged, Harvester Belts

### Construction:

- 1 Polychloroprene impregnated biased fabric
- 2 Specially designed high modulus cushion rubber compound
- 3 Extra high tensile polyester cord (available in aramid cord also)
- 4 High modulus compression rubber

**Temperature Range:** -25°C to +100°C

**Reference Standards:** BS 3790, RMA IP 22, ISO 4184, ISO 5291, ISO 5290, ISO 3410, IS 2494, RMA IP 25, ASAE 211.4

### Features:

- Higher power transmission capacity than standard Belts
- Enhanced longitudinal flexibility due to specially designed cog profile
- Suitable for drives using smaller diameter pulleys and high RPM
- Suitable for reverse bend drive
- Anti-static, oil & heat resistant
- Unique combination of lateral rigidity to reduce dishing effect, offering improved power transmission
- Specially designed compound for significant performance under variable speed conditions
- No bottom cracking / chipping, as Belt design is application-specific
- Low stretch due to high tensile strength cord used in the Belt

### Belt Label:

			Min	Max
6 to 85	5 to 30	22° to 40°	21.5"	200"

# PIX-HARVESTER®-XC

## Ribbed / Poly-V Harvester Belts

### Construction:

- 1 Special design rubberised poly-cotton fabric
- 2 High modulus cushion rubber compound
- 3 High Strength special treated polyester cord
- 4 High modulus compression rubber

### Temperature range:

- 25°C to +100°C (Incase of standard Belts)
- 35°C to +130°C (for special requirement belts)

**Reference Standard:** ISO 9981, 9982, RMA IP 26

### Features:

- Trapezoid-face-ribs on a fibre reinforced rubber matrix for higher power transmission offering resistance to wear and tear, facilitating quiet running
- Reduced vibrations, shock absorber, low stretch and an excellent behavior under heavy load conditions
- Extremely flexible, capable to work on small pulley diameters and serpentine drives
- Anti-static, oil & heat resistance
- Extended service life

### Product range:

Section	Belt Thickness (mm) 't'	Rib Pitch (mm) 'e'	Recommended Minimum Pulley Diameter (mm)	Manufacturing Range Effective Length (mm)	
				Min	Max
AG-PK	4.50	3.56	50.0	280	5100

### Belt Label:

# PIX-HARVESTER®-AGF

## Flat Harvester Belts

### Features:

- High-abrasion resistant outer cover
- High tensile strength with minimum elongation
- Suitable for harvester traction drive
- Temperature range: -18°C to +80°C

**Reference Standard:** PIX proprietary

### Product range:

## Preventive Maintenance Tips

Before proceeding for the maintenance of drive, switch the mains off. Check the pulley for rust or wear, clean it if required.

Drive should never be kept open, protect the drive with the help of a suitable drive guard.

Avoid dressing of belts, never do this under any circumstances.

Be alert all the times, look and listen for anything unwanted, correct it immediately.

Do not expose the belts to oil, spray, liquid, paste or hazardous chemicals, which are incompatible with the belt material.

Belts operating at elevated temperatures above 70°C, should be checked periodically. Use special heat resistant belts to avoid this problem.

Do not mix the belts of various brands, types, used & new ones.

Belt turn over is due to misalignment, worn out pulleys or excessive vibrations.

Squeal is a result of insufficient belt tension. If it continues even after re-tensioning, the drive should be examined for overload. Correct the design, if required.

The noise like chirping of birds occurs because of dust or dry bearings. Clean and lubricate the bearings regularly.

Always use installation allowance so the belts can easily be installed in the pulley grooves. Switch off the drive before changing the belts.

Never place the belt by applying force with the help of a screw driver or a lever. It may damage the fabric top cover, the cords may also break. A belt so fitted will turn over in the pulley.

## Preventive Maintenance Tips

Presence of foreign material can result into excessive wear or breakage of belt.

Belt guard is a must to ensure safety and cleanliness. Screened meshed or grided guards are the best for heat dissipation. Select a proper mesh size which will prevent the entry of human finger or any other object.

Check the belt for cracks at the bottom surface. Cracks can be avoided by using large-diameter and larger reverse bend idler pulleys.

Prevent the whipping of belts. Re-tension them or use belts from same manufacturer or avoid using new and used belts together.

Inspect pulley grooves. Worn out grooves provide allowance for the belts to slip, leading to a premature failure. Use PIX pulley gauges to check the pulley grooves.

Change in ride out/in indicates uneven belt wear or worn-out pulleys.

Do not allow belts to vibrate laterally.

### PIX at a glance..

- Fastest emerging global player in the mechanical power transmission products.
- Over four decades of expertise of manufacturing quality products.
- Strong global brand identity
- Distribution network in over 100 countries
- Global product approvals, quality management systems
- Global presence, subsidiary operations in U.K., Germany and UAE
- State-of-art infrastructure for the development, manufacturing and testing of products
- Dedicated and committed R&D team

Corporate Office, Mumbai

Registered Office
